ABSTRACT OF THE DISCLOSURE

Abstract: A [[new]] broadcast spreader attachment for a powered leaf blower for dispensing large dry particulates such as, but not limited to, grass seeds, fertilizer and chemical nutrients upon a lawn or garden. The attachment typically includes device consists of an elongate main tube [[(5)]] having opposite intake and discharge ends. A secondary smaller tube [[(6)]] is affixed to and in fluid communication with the main tube ~~at an angle of sixty degrees to the horizontal such that the secondary tube is in fluid communication with the main tube.~~ The intake of the main tube is adapted for attachment to a leaf blower such that the discharge of the leaf blower is in fluid communication with the main tube. ~~Provided on the~~ The secondary tube includes [[is]] a particulate flow control apparatus [[(7)]] and adjustment knob [[(8)]] in fluid communication with the secondary tube ~~and which regulates the volume of particulates dispensed by the invention.~~ A supply hose [[(11)]] is attached to the top end of the secondary tube. [[Said]] The hose is additionally attached to a dry particulate hopper [[(12)]] such that the hose is in fluid communication with the secondary tube [[(6)]] and the particulate hopper [[(12)]].
